

# THE LOWDOWN ON HOW TO PREVENT SEXUALLY TRANSMITTED DISEASES

Every year, there are an estimated **20 MILLION** new STD infections in the United States

Anyone who is sexually active can get an STD.

Some groups are disproportionately affected by STDs

## The Good News

STDs **ARE** preventable. There are steps you can take to keep yourself and your partner(s) healthy.

Here's How You Can Avoid Giving or Getting an STD:

## Practice Abstinence

The surest way to avoid STDs is to not have sex.

This means not having vaginal, oral, or anal sex.

## Have Fewer Partners

Agree to only have sex with one person who agrees to only have sex with you.

Make sure you both get tested to know for sure that neither of you has an STD. This is one of the most reliable ways to avoid STDs.

## Talk With Your Partner

Talk with your sex partner(s) about STDs and staying safe before having sex.

It might be uncomfortable to start the conversation, but protecting your health is your responsibility.

## Use Condoms

Using a condom correctly every time you have sex can help you avoid STDs.

Condoms lessen the risk of infection for all STDs. You still can get certain STDs, like herpes or HPV, from contact with your partner's skin even when using a condom.

Most people claimed they used a condom the first time they ever had sex, but when asked about the last 4 weeks, less than one quarter said they used a condom every time.

## Get Vaccinated

The most common STD can be prevented by a vaccine.

The HPV vaccine is safe, effective, and can help you avoid HPV-related health problems like genital warts and some cancers.

### Who should get the HPV vaccine?

Routine vaccination for boys & girls ages 11 to 12

Catch-up vaccination for:

Young women from age 13 to age 26 and young men from age 13 to age 21  
 Gay, Bisexual, & other Men who have sex with Men up to age 26  
 Men with compromised immune systems up to age 26

## Get Tested

Many STDs don't have symptoms, but they can still cause health problems.

The only way to know for sure if you have an STD is to get tested.

## If You Test Positive...

Getting an STD is not the end! Many STDs are curable and all are treatable.

If either you or your partner is infected with an STD that can be cured, both of you need to start treatment immediately to avoid getting re-infected.
